

The Hongkong and Shanghai Banking Corporation Limited

(Incorporated in Hong Kong SAR with limited liability)

Basel III – Pillar 3 disclosures of India Branches

For the period ended 31 March 2014

1 Scope of Application

The capital adequacy framework applies to The Hongkong and Shanghai Banking Corporation Limited – India Branches (the Bank). The Bank has a subsidiary, HSBC Agency (India) Private Limited, which is consolidated in line with AS 21 and full capital deduction is taken for stand-alone financials. The Bank does not have any other Group company where a pro-rata consolidation is done or any deduction is taken. The Bank holds minority interests (2.07% shareholding) in a Group entity HSBC Professional Services (India) Private Limited which is neither consolidated nor is capital deducted. The investment in this company is appropriately risk weighted.

(i) *Capital in all subsidiaries not included in the consolidation*

The aggregate amount of capital held by the Bank in HSBC Agency (India) Private Limited of Rs. 0.2 million is not included in the consolidation and is deducted from capital.

(ii) *Bank's total interest in insurance entities*

The Bank has no interest in any of the insurance entities of the Group.

(iii) *List of Group entities in India not considered for consolidation both under the accounting and regulatory scope of consolidation :*

(Rs '000)

| Name of Entity /Country of Incorporation | Principle activity of the entity | Total balance sheet equity* | Total balance sheet assets* |
|--|--|--|------------------------------------|
| HSBC Asset Management (India) Private Limited | Asset management/portfolio management | 542,000 | 1,246,878 |
| HSBC Securities and Capital Markets (India) Private Limited | Stock broking and corporate finance & advisory | Equity - 4,701,139 Preference - 250,000 | 6,842,520 |
| HSBC Electronic Data Processing (India) Private Limited | Back office / data processing / call centre activities | 3,554,678 | 21,478,100 |
| HSBC Professional Services (India) Private Limited | Providing internal audit services to Group companies | 4,838,000 | 147,297 |
| HSBC Software Development (India) Private Limited | Software design, development and maintenance | 327,260 | 24,251,887 |
| HSBC Bank Oman S.A.O.G, India branch | Banking branch | Omani Riyals 200.031 million (INR equivalent 28,570,000) | 2,319,100 |
| Canara HSBC Oriental Bank of Commerce Life Insurance Company Limited | Life insurance | 9,500,000 | 89,672,353 |
| HSBC Global Shared Services (India) Private Limited | Non-operating company | 25,000 | 47,195 |

The Hongkong and Shanghai Banking Corporation Limited

(Incorporated in Hong Kong SAR with limited liability)

2 Capital Structure (Continued)

(ii) Tier 2 capital

(Rs '000)

| | As at 31 March 2014 | As at 31 March 2013* |
|--|------------------------|-------------------------|
| Property revaluation reserves | 3,591,373 | 3,395,054 |
| General Loss Provisions / Other Eligible Reserves | 8,714,420 | 7,411,676 |
| Less: Deductions from Tier II Capital | - | (35,714) |
| - Charge for credit Enhancement on Securitisation deal | - | (35,614) |
| - Investment in subsidiaries in India | - | (100) |
| Total Tier II Capital | 12,305,793 | 10,771,016 |

*as per Basel-II Capital Adequacy Framework

(iii) Debt capital instruments in Tier 2 capital

No debt capital instruments are included in Tier 2 capital.

(iv) Subordinated debt in Tier 2 capital

There is no amount outstanding in respect of subordinated debt as at 31 March 2014.

(v) Other deductions from capital

There are no other deductions from capital.

(vi) Total eligible capital

The total eligible capital is Rs.145,444 million (previous year Rs.131,576 million).

3 Capital Adequacy

The Bank's capital management framework is shaped by its structure, business model and strategic direction. There is a continuing need to focus on effective management of risk and commensurate capital to bear that risk. The Bank carefully assesses its growth opportunities relative to the capital available to support them, particularly in light of the economic environment and advent of Basel III. The Basel III capital rules became effective from 1 April 2013 except for those relating to the Credit Valuation Adjustment (CVA) risk capital charge for over the counter derivatives. These rules are effective from 1 April 2014.

We continue to monitor developments and believe that our current robust capital adequacy position means we are well placed for continuing compliance with the Basel III framework.

The Bank maintains a strong discipline over capital allocation and ensuring that returns on investment cover capital costs.

There is no significant subsidiary for which the above disclosure is required.

The Hongkong and Shanghai Banking Corporation Limited

(Incorporated in Hong Kong SAR with limited liability)

Basel III – Pillar 3 disclosures of India Branches (*Continued*)

For the period ended 31 March 2014

4 Credit risk:

a. General

Credit Risk is the risk of financial loss if a customer or counterparty fails to meet an obligation under a contract. It arises principally from direct lending, trade finance, marked-to-market exposure from derivative contracts and certain off-balance sheet products such as guarantees and from the Bank's holdings of assets in the form of debt securities.

Strategy and Processes

The HSBC Group Head Office formulates high-level risk management policies for the HSBC Group worldwide. The Bank has formulated local credit guidelines consistent with HSBC policy and Reserve Bank of India's (RBI) guidelines. The Bank's risk management policies and procedures are subject to a high degree of oversight and guidance to ensure that all types of risk are systematically identified, measured, analysed and actively managed.

The Bank has standards, policies and procedures dedicated to the monitoring and management of credit risk, which include the following:

- Establish a separate Risk Management unit independent of business with a matrix of delegated approval authorities for the approval of credit risks.
- Establish and maintain the exposure norms policy. This policy delineates the Bank's maximum exposures to individual customers, customer groups and other risk concentrations. This policy also ensures compliance with the ceilings and lending guidelines relating to specific market sectors and industries.
- Establish and monitor the credit appetite for particular sectors and the minimum criteria that must be met by new customers.
- Constitute a Risk Management Committee (RMC) consisting of senior executives, which reviews overall portfolio risks and key risks facing the Bank in India.
- Undertake independent review and objective assessment of the credit risk. All commercial non-bank credit facilities originated are subject to review prior to the facilities being committed to customers.
- Control exposures to banks and other financial institutions. The Group's credit and settlement risk limits to counterparties in the finance and government sectors are designed to optimise the use of credit availability and avoid excessive risk concentration.
- Manage exposures to debt securities by establishing controls in respect of the liquidity of securities held for trading and setting issuer limits for financial investments. Separate portfolio limits are established for asset-backed securities and similar instruments.
- Control cross-border exposures to manage country and cross-border risk through the imposition of country limits with sub-limits by maturity and type of business.

The Hongkong and Shanghai Banking Corporation Limited

(Incorporated in Hong Kong SAR with limited liability)

Basel III – Pillar 3 disclosures of India Branches (Continued)

For the period ended 31 March 2014

4 Credit risk: (Continued)

a. General (Continued)

Strategy and Processes (Continued)

- Maintain and develop HSBC's risk rating framework and systems in order to classify exposures meaningfully and facilitate focused management of the risks involved. Rating methodologies are based upon a wide range of financial analytics together with market data-based tools, which are core inputs to the assessment of customer risk. For larger facilities, while full use is made of automated risk rating processes, the ultimate responsibility for setting risk ratings rests with the final approving executive. Risk grades are reviewed frequently and amendments, where necessary, are implemented promptly.

Structure and Organisation

Credit approval authorities are delegated from the Chief Risk Officer at the Regional Head Office in Hong Kong to the Chief Executive Officer, India and the Chief Risk Officer, India. The Chief Risk Officer in India maintains a strong functional reporting line to the Chief Risk Officer in Hong Kong.

The Risk Management function is responsible for the quality and performance of its credit portfolios and for monitoring and controlling all credit risks in its portfolios, including those subject to approval by the Regional Head Office in Hong Kong.

Scope and nature of risk reporting, measurement, monitoring and mitigation

The Bank manages and directs credit risk management systems initiatives. HSBC has constructed a centralized database covering substantially all of the Group's direct lending exposures, to deliver an increasingly granular level of management reporting.

The Bank is required to maintain regular reporting on its credit risk portfolio, to include information on large credit exposures, concentrations, industry exposures, levels of impairment provisioning and country exposures.

Non-performing advances

Non-performing advances are identified by periodic appraisals of the portfolio by management or in accordance with RBI guidelines, whichever is earlier.

Specific provisions are made on a case-by-case basis based on management's assessment of the degree of impairment of the advances (other than homogeneous unsecured retail loans), subject to the minimum provisioning levels prescribed by the RBI. When there is no longer any realistic prospect of recovery, the outstanding advance is written off.

The Hongkong and Shanghai Banking Corporation Limited

(Incorporated in Hong Kong SAR with limited liability)

Basel III – Pillar 3 disclosures of India Branches (Continued)

For the period ended 31 March 2014

4 Credit risk: (Continued)

a. General (Continued)

Non-performing advances (Continued)

Special attention is paid to problem exposures, which are subject to more frequent and intensive review and reporting, in order to accelerate remedial action. The bank engages with customers closely to work out of distress situations.

Subject to the minimum provisioning levels prescribed by the RBI, the provision on homogeneous unsecured loans relating to retail business is assessed on a portfolio basis using the historical loss and/or net flow rate method.

b. Disclosures for portfolios under the standardised approach

The Bank uses the following External Credit Assessment Institutions (ECAIs) approved by RBI to calculate its capital adequacy requirements under the standardised approach to credit risk for Corporate, Bank and Sovereign counterparties.

Domestic ECAIs for external ratings of Indian Corporates:

- a) Credit Analysis and Research Limited (CARE);
- b) CRISIL Limited;
- c) India Ratings and Research Private Limited (FITCH);
- d) ICRA Limited; and
- e) Brickwork Ratings India Private Limited.

The Bank used the ratings issued by the ECAIs (for both long term and short term facilities) to risk weight both funded as well as non-funded exposures to corporate customers.

The process used by the Bank to transfer public issue ratings onto comparable assets in the banking book is in line with RBI's Prudential Guidelines on Capital Adequacy and Market Discipline issued on 1 July 2013.

The mapping of external credit ratings and risk weights for corporate exposures is provided in the grids below:

Risk weight mapping of long term corporate ratings

| Long term ratings | Risk weights |
|-------------------|--------------|
| AAA | 20% |
| AA | 30% |
| A | 50% |
| BBB | 100% |
| BB & Below | 150% |
| Unrated | 100% |

The Hongkong and Shanghai Banking Corporation Limited

| CARE D | CRISIL D | FITCH D | ICRA D | 150% |
| Unrated | Unrated | Unrated | Unrated | 100% |

The claims on banks incorporated in India and foreign banks branches in India, excluding investment in equity shares and other instruments eligible for capital status, are risk weighted as shown below:

| Capital to Risk weighted Assets Ratio (CRAR)% | Scheduled Banks | Other Banks |
|---|-----------------|-------------|
| > 9 | 20% | 100% |
| 6 to < 9 | 50% | 150% |
| 3 to < 6 | 100% | 250% |
| 0 < 3 | 150% | 350% |
| Negative | 625% | 625% |

International ECAs for external ratings of Foreign Banks, Foreign Sovereigns, Foreign Public Sector Entities and Non-Resident Corporates:

- Fitch;
- Moody's; and
- Standard & Poor's (S & P)

The process used by the Bank to transfer public issue ratings onto comparable assets in the banking book is in line with RBI Guidelines.

The mapping of external credit ratings and risk weights for the above entities are provided in the grids below:

Risk weight mapping of foreign banks

| | | | | | | |
|----------------------------------|-----------|-----|-----|---------|---------|---------|
| S&P and Fitch ratings | AAA to AA | A | BBB | BB to B | Below B | Unrated |

| Risk weight | 20% | 50% | 100% | 150% | 100% |

Policy for Collateral Valuation and Management

It is the Bank's policy that all corporate and institutional facilities be reviewed (and hence revalued) at least on an annual basis. All deeds of ownership/titles related to collateral are held in physical custody under control of executives independent of the business.

For mortgages, the credit policy clearly outlines the acceptable Loan to value ratio (LVR) for different types of properties. The maximum LVR offered to customers was capped at 80% of the mortgaged property since 1 April 2011, except if approved under a special lending authority.

The valuation of property is initiated through a bank-empanelled valuer who is an expert on the subject matter. Additionally, as per the Bank's Risk Valuation Policy, in some cases where real estate is held as a security, dual valuations are initiated in order to have the benefit of a second opinion on the mortgaged property. The disbursement of the loan is handled through an empanelled lawyer who in exchange collects the security documents from the borrower. The property documents thus collected are attached to the credit file and sent to central archives where the same is stored in a secure manner.

An in-house Property Price Index (PPI) has been developed which is used to measure the actual LVR of the properties financed by the Bank. The methodology for PPI development has been approved by Risk and refreshed every 6 months. However, should a loan become a non-performing asset (NPA), a fresh valuation is initiated through the bank-empanelled valuer and the provisions applicable are calculated accordingly.

The Hongkong and Shanghai Banking Corporation Limited

4 Credit risk: (Continued)

b. Disclosures for portfolios under the standardised approach (Continued)

Main Types of Collateral taken by HSBC

The main types of recognised collateral taken by the Bank appear in the list of eligible financial collaterals advised in Section 7.3.5 of RBI's Prudential Guidelines on Capital Adequacy and Market Discipline, and include (but are not limited to) cash on deposits, equities listed in a main index and/or a recognised exchange, units or shares in collective investment schemes and various recognised debt securities. Further the main types of recognised collateral taken by the Bank for mortgages include plots of land, ready possession and under construction properties.

Main Types of Guarantor Counterparty and their Creditworthiness

As stated in Section 7.5 of the RBI's Prudential Guidelines on Capital Adequacy and Market Discipline, certain guarantees are recognised for credit risk mitigation purposes. The main types of guarantees are from sovereigns, corporates and banks. For a corporate guarantee to be recognised as a credit risk mitigant for the purposes of capital adequacy calculation, the guarantee provider must have a credit rating equivalent to AA- or better from an ECAI recognised by the RBI.

Information about (Market or Credit) Risk Concentrations within the mitigation taken

The quantum of the credit portfolio which benefits from financial collaterals and/or guarantees as credit risk mitigants is an insignificant portion of the customer advances of the Bank. Therefore the credit and/or market concentration risks are not material

The total exposure (including non-funded post Credit Conversion Factors) that is covered by eligible financial collateral, after the application of haircuts is Rs. 43,862 million (previous year: Rs.55,671 million).

(i) Total gross credit risk exposures by geography

c. Securitisation: disclosure for standardised approach

The Bank acts as originator, servicer and investor in securitisation transactions. Our strategy is to use securitisations to diversify our sources of funding for asset origination, capital efficiency, managing liquidity and meet the priority sector lending (PSL) requirements. The Bank also undertakes 'purchase' transactions through the direct assignment route.

The Bank participates in securitisation transactions in any or all of the following roles:

- **Originator:** The Bank uses Special Purpose Vehicle (SPV) to securitise customer loans and advances that we have originated, in order to diversify our sources of funding for asset origination and for capital efficiency purposes. In such cases, we transfer the loans and advances to the SPVs for cash, and the SPVs issue debt securities to investors to fund the cash purchases. Credit enhancements to the underlying assets may be used to obtain investment grade ratings on the senior debt issued by the SPVs.
- **Servicer:** For sold assets, the Bank undertakes the activity of collections and other servicing activities such as managing collections and monthly payouts to investors / assignee with respect to the underlying assets.
- **Investor:** The Bank invests in Pass Through Certificates (PTCs) for yield and priority sector lending opportunities. We have exposure to third-party securitisations which are reported as investments. These securitisation positions are managed by a dedicated team that uses a combination of market standard systems and third party data providers to monitor performance and manage market and credit risks.

Valuation of securitisation positions: The investments of the Bank in PTCs have been marked to market on the basis of the Base Yield Curve and the applicable spreads as per the spread matrix relative to the Weighted Average Maturity of the paper as notified by Fixed Income Money Market and Derivative Association of India (FIMMDA).

The Hongkong and Shanghai Banking Corporation Limited

(Incorporated in Hong Kong SAR with limited liability)

Basel III – Pillar 3 disclosures of India Branches (Continued)

For the period ended 31 March 2014

4 Credit risk: (Continued)

c. Securitisation: disclosure for standardised approach (Continued)

Securitisation accounting treatment: The accounting treatment applied is as below:

- Originator: Securitised assets are derecognized upon sale if the true sale criteria are fully met and the bank surrenders control over the contractual rights that comprise the financial asset. In respect of credit enhancements provided or recourse obligations accepted by the Bank, appropriate provision/ disclosures is made in accordance with AS 29 – ‘Provisions, contingent liability and contingent assets’. Gains on securitisation, being the excess of consideration received over the book value of the loans and provisions against expected costs including servicing costs and the expected delinquencies are amortised over the life of the securities issued by the SPV. Losses are recognized immediately. Sale and transfer that do not meet the above criteria are accounted for as secured borrowings.
- Servicer: In case the Bank acts as servicer of the securitisation deal the fees charged for servicing the loans would be recognized on an accrual basis.
- Investor: The investment in PTCs are accounted for as Available for Sale (AFS) investments and valued as per the note above. The loan assignment deals are classified as advances.

Securitisation regulatory treatment:

- Originator: In case the loan is derecognised from the books, no capital needs to be maintained by the Bank. However the Bank is required to make appropriate deduction from capital for credit enhancements provided in line with the RBI guidelines.
- Servicer: No impact on capital.
- Investor: The Bank uses the issue specific rating assigned by eligible ECAI's to compute the RWAs of the investment in the PTCs.

ECAI's used

The Bank uses one of the following ECAIs for all types of securitisation deals:

- a) Credit Analysis and Research Limited;
- b) CRISIL Limited;
- c) India Ratings and Research Private Limited; and
- d) ICRA Limited.

The Hongkong and Shanghai Banking Corporation Limited

4 Credit risk: (Continued)

c. Securitisation: disclosure for standardised approach (Continued)

(i) Details of securitisation of standard assets

(Rs'000)

| | As at 31 March 2014 | As at 31 March 2013 |
|--|------------------------|------------------------|
| Total number of loan assets securitised during the year | - | - |
| Total book value of loan assets securitised during the year | - | - |
| Sale consideration received for the securitised assets | - | - |
| Gain on sale on account of securitisation during the year | - | - |
| Gain on securitisation recognised in Income Statement | 1,243 | 1,762 |
| The unamortised gain as at 31 March | 976 | 2,219 |
| Outstanding value of services provided by way of Credit Enhancement | 40,025 | 40,025 |

The gain on sale on account of securitisation for corporate loans represents the difference between the sale consideration and the book value. The gain on sale on account of securitisation on retail loans represents the discounted value of the excess interest strip retained by the Bank.

(ii) Securitisation of impaired/past due assets

The Bank has not securitised any impaired/past due assets (previous year: NIL).

(iii) Loss recognised on securitisation of assets

The Bank has not recognised any losses during the current year for any securitisation deal (previous year: NIL).

(iv) Securitisation exposures retained or purchased

The Bank has made investments in Pass Through Certificates (PTCs) of Rs. 24,975 million as at 31 March 2014 (previous year: Rs.18,791 million). The portfolio consists of Commercial Vehicle Loans which are used for business purposes. These attract a risk weight of 20% since they are AAA rated instruments.

5 Market risk in trading book

The objective of the Group's market risk management is to manage and control market risk exposures in order to optimise return on risk while maintaining a market profile consistent with the Group's status as one of the world's largest banking and financial services institutions.

Market risk is the risk that movements in foreign exchange rates, interest rates, or equity prices will result in profits or losses to the Bank. Market risk arises on financial instruments, which are measured at fair value in the trading book. The objective of market risk management is to control market risk exposures to achieve an optimal return while maintaining risk at acceptable levels.

Strategy and Processes

The Bank separates exposure to market risk into trading and non-trading portfolios. Trading portfolios include those positions arising from market-making, position taking and other marked-to-market positions so designated.

Non-trading portfolios (included in the banking book) include positions that arise from the interest rate management of the Bank's retail and commercial banking assets and liabilities, financial investments designated as available-for-sale and held-to-maturity.

The risk components apply equally to cash and to derivative instruments. All open market risk is subject to approved limits. Limits are established to control the level of market risk and are complementary to counterparty credit limits.

The existence of a market risk trading limit does not confer any credit, counterparty, country or sovereign risk limit; they are established separately through normal credit procedures.

The level of market risk limits set for each operation depends upon: the size, financial and capital resources of the business, the business plan, the experience and track record of the management, dealers and market environment, as well as the Group's risk appetite.

Market risk limits are reviewed annually.

Structure and Organisation of management of risk

The management of market risk exposure in derivatives is principally undertaken in Markets, where the majority of value at risk (VaR) of the Bank and almost all trading VaR resides, using approved risk limits. Limits are set for portfolios, products and risk types, with market liquidity being a primary factor in determining the level of limits set. Global Risk, an independent unit within the Bank, is responsible for our market risk management policies and measurement techniques.

The Bank has an independent market risk management and control function which is responsible for measuring market risk exposures in accordance with the policies defined by Risk, and monitoring and reporting these exposures against the prescribed limits on a daily basis.

Basel III – Pillar 3 disclosures of India Branches (Continued)

For the period ended 31 March 2014

5 Market risk in trading book (Continued)

Scope and nature of risk measurement, reporting and monitoring

The Bank's derivative activities give rise to open positions in portfolios of derivatives. These positions are managed constantly to ensure that they remain within acceptable risk levels. Derivatives market risk arises from interest rates, foreign exchange, and credit spreads within Global Banking and Markets.

The Bank employs a range of tools to monitor and limit market risk exposures. These include sensitivity analysis, value at risk ('VaR'), stressed VaR and stress testing.

While VaR provides a measure of the market risk in the Bank, sensitivity analysis (e.g Present Value of 1 basis point (PV01)) and VaR are more commonly utilised for the management of the business units. Stress testing and stressed VaR complement these measures with estimates of potential losses arising from market turmoil. Market risk is managed and controlled through approved limits.

Our VaR and stressed VaR models are predominantly based on historical simulation. VaR measures are calculated to a 99% confidence level and use a one-day holding period, whereas stressed VaR uses a 10-day holding period. The accuracy of our VaR models is routinely validated by back-testing the actual daily profit and loss results, adjusted to remove non-modelled items such as fees and commissions, against the corresponding VaR numbers.

Limits are proposed by the Head of Treasury and are endorsed by local Chief Risk Officer (CRO) and Chief Executive Officer (CEO) before submission to Group Risk for approval. Upon approval of country limits, they are delegated by entity's CEO to Head of Treasury, who delegates it downward within his team.

These limits are monitored daily by the Bank's Global Markets Product Control Department through system reports and advised to senior management on an ongoing basis.

(i) *Capital requirements for market risk*

6 Operational risk

Operational risk is the risk of loss resulting from inadequate or failed internal processes, people and systems or from external events, including legal risk. It is inherent in every business organisation and covers a wide spectrum of issues.

Strategy and Process

The Bank manages this risk within a control-based environment in which processes are documented, authorisation is independent and transactions are reconciled and monitored. This is supported by an independent programme of periodic reviews undertaken by internal audit and internal control departments, and continuous reviews by concurrent audit and by monitoring external operational risk events, which ensure that the Bank stays in line with industry best practice and takes account of learnings from publicised operational failures within the financial services industry.

Structure and Organisation

The Risk Management Committee (RMC) of the Bank, a sub-committee of INM Executive Committee (EXCO), is responsible for the Operational Risk management of the Bank. The RMC meets monthly, or more frequently if required, to assess and monitor operational risks and, where appropriate, authorise mitigating actions. The RMC is supported by an independent Operational Risk Management team within the Risk function. Furthermore, senior representatives from each business and function are tasked with responsibility for ongoing operational risk management. The RMC is also supported by the Operational Risk Management Committee (ORMC), which is constituted by the Chief Risk Officer, Chief Financial Officer and the senior representatives of the businesses and functions responsible for operational risk management, which meets to discuss operational risk issues and operationalise mitigating actions authorized by the RMC.

The Bank has a ‘Three lines of defence’ model in place which provides a format within which to structure and demonstrate roles, responsibilities and accountabilities for decision making, risk and control to achieve effective governance, risk management and assurance. The first line of defence ensures all key risks within their operations are identified, mitigated and monitored by appropriate internal controls within an overall control environment. Every employee is responsible for the risks that are a part of their day to day jobs. The second line of defence consists of the Global Functions such as Global Risk, Finance and HR who are responsible for providing assurance, challenge and oversight of the activities conducted by the first line. The third line of defence covers the role of Internal Audit, who provide independent assurance over the first and second lines of defence.

Scope and Nature of Risk reporting, monitoring and mitigation

The Bank has codified its operational risk management process in a high level standard, supplemented by more detailed formal guidance. This explains how the Bank manages operational risk by identifying, assessing, monitoring, controlling and mitigating the risk, rectifying operational risk events, and implementing any additional procedures required for compliance with RBI requirements.

The Hongkong and Shanghai Banking Corporation Limited

(Incorporated in Hong Kong SAR with limited liability)

Basel III – Pillar 3 disclosures of India Branches (*Continued*)

For the period ended 31 March 2014

6 Operational risk (*Continued*)

Information systems are used to record the identification and assessment of operational risks and to generate appropriate, regular management reporting.

Assessments are undertaken of the operational risks facing businesses and the risks inherent in its processes, activities and products. Risk and Control Assessment is done on a regular basis.

A regular report on operational losses is made to the Bank's senior management through the RMC. A consolidated summary and scorecard of the operational loss incidents affecting the key businesses is shared with the Bank's senior management on a bi-monthly basis and significant loss events, gaps, mitigants etc are discussed.

7 Interest rate risk in the banking book (IRRBB)

Interest rate risk in non-trading portfolios arises principally from mismatches between the future yield on assets and their funding cost as a result of interest rate changes.

Asset, Liability & Capital Management ('ALCM') is responsible for measuring and controlling non-trading interest rate risk under the supervision of the Asset and Liability Management Committee (ALCO).

Its primary responsibilities are

- To define the rules governing the transfer of interest rate risk from the commercial bank to Balance Sheet Management ('BSM');
- To ensure that all market interest rate risk that can be hedged is effectively transferred from the global businesses to BSM; and
- To define the rules and metrics for monitoring the residual interest rate risk in the global businesses.

Market risk in the banking book arises principally from structural mismatches in assets and liabilities and from off-balance-sheet instruments arising from repricing risk, yield curve risk and basis risk.

Further, an analysis of these risks incorporates assumptions on optionality in certain products such as in mortgage prepayments, and from behavioural assumptions regarding the economic duration of liabilities which are contractually repayable on demand, for example, current accounts.

IRRBB is monitored as part of the Bank's Internal Capital Adequacy Assessment Process and capital maintained, if required, based on this assessment.

Strategy and Process

In order to manage this risk efficiently, interest rate risk in the banking book is transferred to the supervision of the Treasurer.

The transfer of market risk to the Treasury is achieved through a formal transfer pricing framework wherein a series of internal deals are executed between the business units and Treasury. In certain products, the interest rate risk behaviour may differ from the contractual nature thereby requiring a study to determine the correct approach in managing the risk. This is achieved through a behaviouralisation study that is periodically updated and placed before the Asset and Liability Committee for approval, along with underlying assumptions.

The Hongkong and Shanghai Banking Corporation Limited

(Incorporated in Hong Kong SAR with limited liability)

Basel III – Pillar 3 disclosures of India Branches (Continued)

For the period ended 31 March 2014

7 Interest rate risk in the banking book (IRRBB) (Continued)

The different type of non-trading interest rate risk and controls which the Group uses to quantify and limit its exposure to these risks are categorized as follows:

- Risk transferred to BSM and managed by BSM within a defined risk mandate
- Risk which remains outside BSM because it cannot be hedged or which arises due to behaviouralised transfer pricing assumptions.
- Basis risk which is transferred to BSM when it can be hedged.
- Model risks not captured by above

Structure and Organisation

The Bank has an independent market risk management and control function which is responsible for measuring interest rate risk exposures in accordance with prescribed policies, monitoring and reporting these exposures against the approved limits on a daily basis. This monitoring process effectively builds on the level of interest rate risk that is commensurate with the capital held.

Scope and nature of Risk reporting, measurement, monitoring and mitigation

The Bank monitors the sensitivity of projected net interest income under varying interest rate scenarios. The Bank effectively identifies, measures, monitors and controls the interest rate risk in the banking book, to mitigate the impact of prospective interest rate movements which could reduce future net interest income, whilst balancing the cost of such hedging activities on the current net revenue stream.

The Bank manages the interest rate risk arising from commercial banking activities in order to maximise the return commensurate with its capital base, without exposing the Bank to undue risk arising from movements in market interest rates. This involves the use of money market and derivative instruments available in the interbank market, in order to achieve the economic perspective set by Management on future market rates and market liquidity.

(i) Sensitivity to upward shocks

(Rs'000)

| | As at | As at |
|--|--------------------|--------------------|
| IRRBB: Sensitivity to upwards 100 bps movement in interest rates by currency | 31 March 2014 | 31 March 2013 |

Basel III – Pillar 3 disclosures of India Branches (*Continued*)

For the period ended 31 March 2014

8 Counterparty Credit Risk

Methodology used to assign economic capital and credit limits for counterparty credit exposures

Counterparty credit risk arising from over-the-counter (OTC) derivatives is calculated in both the trading and non-trading books, and is the risk that a counterparty to a transaction may default before completing the satisfactory settlement of the transaction on any foreign exchange, interest rates, or equity contracts. An economic loss occurs if the transaction or portfolio of transactions with the counterparty has a positive economic value at the time of default.

As per the Master Circular - Prudential Guidelines on Capital Adequacy and Market Discipline - New Capital Adequacy Framework (NCAF) of RBI dated 1 July 2013, banks are expected to use the standardised method for computation of counterparty credit exposure using the Current Exposure Method (CEM) for market related off balance sheet exposures. Under this method the exposure on all the derivative contracts is calculated as the sum of current credit exposure/replacement cost i.e. the sum of the positive mark-to-market (MTM) of the contracts (negative MTMs are to be ignored) and the potential future exposure (PFE). PFE is determined based on a set percentage multiplied by the notional of the deal. The percentage by which the notional is multiplied is dependent upon the type of the product and the tenor as prescribed in RBI guidelines. PFE so obtained is added to the gross positive replacement cost to arrive at the final exposure at default.

Bilateral netting of counterparty credit exposures, in derivative contracts, i.e. bilateral netting of MTM values arising on account of such derivative contracts is not permitted. Accordingly, only gross positive MTM value of such contracts is considered for the purposes of exposure computation for capital adequacy.

The Group assesses total economic capital requirements centrally for the risk by utilising the embedded operational infrastructure used for the Pillar 1 capital calculation.

Limits for counterparty credit risk exposures are assigned within the overall credit process for distinct customer limit approval. The measure used for counterparty credit risk management – both limits and utilizations – is the 95th percentile of potential future exposure.

Policies for securing collateral and establishing credit reserves

Despite these being a standard credit mitigant for OTC derivatives across the Globe, market practice in this respect is still evolving in India. The bank has executed a few Credit Support Annexes (CSA's) and is currently negotiating with some more counterparties.

The credit valuation adjustment (CVA) is an adjustment to the value of OTC derivative transaction contracts to reflect, within fair value, the possibility that the counterparty may default or migrate to a lower credit grade, and we may not receive the full market value of the transactions. We calculate a separate CVA for each counterparty to which we have exposure. The adjustment aims to calculate the potential loss arising from the portfolio of derivative transactions against each third party, based upon a modeled expected positive exposure profile, including allowance for credit risk mitigants such as netting agreements and CSA's.

8 Counterparty Credit Risk (Continued)

The bank computes a CVA for its markets related off balance sheet exposures and takes it to the profit and loss account for financial reporting purposes. The same will be implemented for capital adequacy purposes under Basel III in expectation with RBI Guidelines for the computation to be done for quarter ending June 2014.

Wrong-way Risk exposures

Wrong-way risk is a form of concentration risk and arises when there is a strong correlation between the counterparty's Probability of Default (PD) and the MTM value of the underlying transaction. We use a range of procedures to monitor and control wrong-way risk, including requiring prior approval before undertaking wrong-way risk transactions outside pre-agreed guidelines.

Impact of Credit Rating Downgrade

The Credit rating downgrade clause in an International Swaps and Derivatives Association (ISDA) Master Agreement is designed to trigger a series of events which may include the requirement to pay or increase collateral, the termination of transactions by the non-affected party, or assignment by the affected party, if the credit rating of the affected party falls below a specified level. At the Group level, we assess additional collateral requirements where credit ratings downgrade language affects the threshold levels within a collateral agreement.

Quantitative Disclosures

| | <i>(Rs '000)</i> |
|---|----------------------|
| | As at |
| Particulars | 31 March 2014 |
| Gross positive fair value of contracts | 154,598,250 |
